

**Listing of the Claims:**

Please amend the claims as follows and replace all prior versions and listings of the claims in the application with the following listing of claims:

1. (Currently Amended) A pre-folded flower wrap comprising:  
a single folded rectangular sheet of material comprising a single layer and a plurality of scored intersecting lines, the plurality of scored intersecting lines defining distinct sections in the single sheet of material and a distinct folding sequence when moving the sheet of material from an unfolded position to a folded position comprising a pre-determined folded shape, the folding sequence comprising a first fold across a scored line that defines two of the distinct sections, the first fold ~~overlapping a portion of the two distinct sections of the single sheet of material to create two layers from the single sheet of material and subsequent folds that position one layer as an inner wrap and one layer as an outer wrap, the outer wrap surrounding the inner wrap, and that form the single sheet of material into the pre-determined folded shape comprising an overlapping portion, a plurality of peaked sections comprising corners of the rectangular sheet and multiple layers of flower wrap that comprise an appearance of each of two separate layers of flower wrap, the inner wrap layer and the outer wrap layer, each separately having been wrapped by hand completely around a floral arrangement such that both layers surround the floral arrangement and one the outer layer surrounds the other inner layer, wherein the pre-determined folded shape further comprises the functionality of a flower sleeve to facilitate placement of the floral arrangement within the multiple layers of flower wrap without having to wrap either layer of flower wrap around the floral arrangement.~~
2. (Canceled)
3. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises visual indicia arranged to illustrate the folding sequence.

4. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises a fastening means disposed on the overlapping portion when the sheet of material is in the folded position to secure the pre-folded flower wrap in the pre-determined shape.
5. (Previously Presented) The pre-folded flower wrap of claim 4, wherein the fastening means comprises adhesive, double-sided tape, mechanical fasteners, direct bonds or combinations thereof.
6. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the pre-determined shape is generally conical having an open top and bottom.
7. (Canceled)
8. (Canceled)
9. (Currently Amended) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises ~~transparent areas and~~ translucent markings disposed ~~across in~~ one of the two distinct sections of the sheet of material that becomes the inner wrap, the other one of the two distinct sections that becomes the outer wrap comprising a transparent area and the folding sequence overlaps and aligns the transparent areas and the distinct section containing the translucent markings to produce ~~an appearance~~ when the sheet is in the folded position of a generally translucent inner wrap surrounded by a transparent outer wrap.
10. (Currently Amended) The pre-folded flower wrap of claim 9, wherein the translucent markings ~~are disposed across only~~ completely fill one of the two layers distinct section of the sheet of material formed defined by the scored line across which the first fold is made.

11. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises a plurality of folded positions, each one of the plurality of folded positions corresponding to a distinct pre-folded flower wrap, the plurality of scored intersecting lines defining a plurality of distinct folding sequences, each one of the distinct folding sequences associated with one of the folded positions and used when moving the sheet of material from the unfolded position to the desired folded position.

12-17. (Canceled)

18. (Currently Amended) A pre-folded flower wrap comprising:  
a single folded sheet of material comprising:

a plurality of scored intersecting lines, the plurality of intersecting lines defining distinct sections in the single sheet of material and a distinct folding sequence when moving the sheet of material from an unfolded position to a folded position;  
a first one of the distinct sections comprising a transparent areas; and  
translucent opaque markings disposed filling a second one of the distinct sections  
of across the single sheet of material and arranged to produce a selected  
appearance when the single sheet is in the folded position;

wherein the folding sequence comprising a first fold across a line that defines the first and second distinct sections and that overlaps and aligns the transparent areas and the  
translucent opaque marking filled section to form two layers, a transparent outer wrap  
layer and an opaque inner wrap layer, from of the single sheet of material and subsequent  
folds that to produce a pre-determined folded shape comprising an appearance of an  
opaque generally translucent inner wrap surrounding a floral arrangement and surrounded  
by a transparent outer wrap and of the transparent opaque inner wrap and the transparent  
outer wrap each having been separately wrapped by hand completely around the floral  
arrangement when the sheet is in the folded position.

19. (Previously Presented) The pre-folded flower wrap of claim 18, wherein the sheet of

material comprises a single layer.
